PITCH DECK

MemeCheck

Rug-risk check for Solana meme coins, *in seconds.*

- Free · no account
- MIT open source
- English + العربية

Live at memecheck.pages.dev

GRANT REQUEST	PLAN	TIMELINE
$10,000	3 milestones	~10–12 wks

Most meme coins *don't survive the day.*

i.

Most pump.fun meme coins die within hours.

Launching takes a minute, so serial launchers and coordinated wallets recycle the same playbook.

ii.

The warning signs are on-chain — but scattered.

Dev history, holder clusters, snipers, liquidity and contract flags live across ~5 different tools.

iii.

Decisions happen in minutes, often on a phone.

Nobody cross-checks five dashboards on a 6-inch screen before a swap.

Paste a contract address. *Get a verdict.*

7iYM9cjp…Rdf77pump

Check

Low	Medium	High	Extreme
FEW FLAGS	BE CAREFUL	RED FLAGS	AVOID

FAIL Creator launched 754 other coins; 150 of 150 checked are dead or rugged.

WARN Liquidity is only $16.2K; prices can be moved easily and exits may be hard.

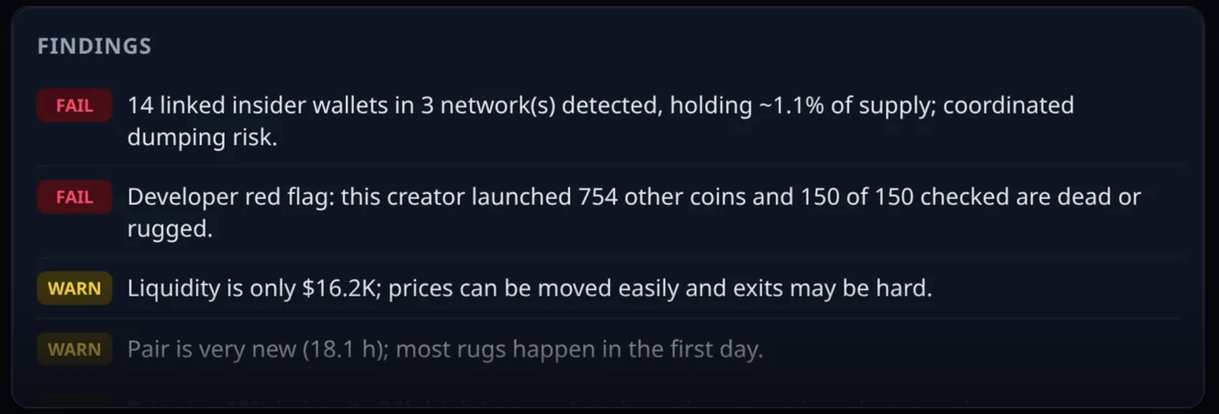

PASS Mint and freeze authority revoked; LP burned at migration.

Reasons quoted from a live High-risk scan (Oct 2026). Plain language, no jargon.

LIVE PRODUCT · VERDICT CARD

PLAIN-LANGUAGE FINDINGS

Six checks, *one scan.*

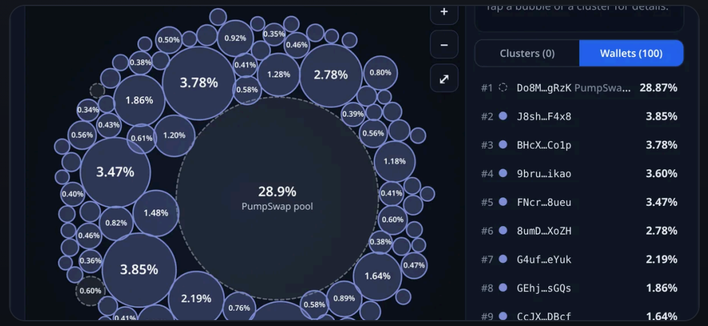

01 Developer history

Serial-launcher detection: every earlier coin by the creator wallet, dead or alive.

02 Live sniper detection

Early buyers in the create / next slot, flagged as bots or pros.

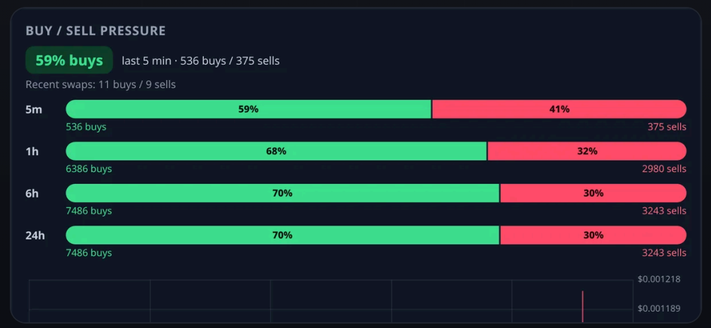

03 Holder cluster bubble map

Linked wallets share a colour; pools and burns are excluded.

04 Liquidity flows

Organic traders vs wash-like round-trips around the pool.

05 Buy / sell pressure

5m · 1h · 6h · 24h split, live candles and big-trade markers.

06 Contract checks

Mint / freeze authority, Token-2022, LP lock, honeypot & tax.

Traders act fast — *on their phones.*

One-tap safety check

Right in the wallet flow, before the swap — not in a desktop tab.

Built for Seeker users

A dApp Store app with Mobile Wallet Adapter: scan what you hold, no custody.

Arabic-first, already live

Full right-to-left Arabic UI alongside English, today on the web.

See a token → MemeCheck badge → Swap — or skip

$10,000 · three milestones · *~10–12 weeks.*

MILESTONE 1

$4,000

Android app on the Solana dApp Store

- TWA first, then native screens
- Full scan: verdict, findings, dev history, snipers, maps
- Share card for every result
- Arabic + English UI

MILESTONE 2

$3,000

Mobile Wallet Adapter integration

- Connect wallet (read-only, no custody)
- Scan every token you hold
- Risk badges across your portfolio

MILESTONE 3

$3,000

Alerts + “check before you swap”

- Push alerts on watched tokens
- Liquidity pulled · large dev sell
- Risk level upgraded
- Pre-swap check flow

BUDGET SPLIT

~10–12 weeks

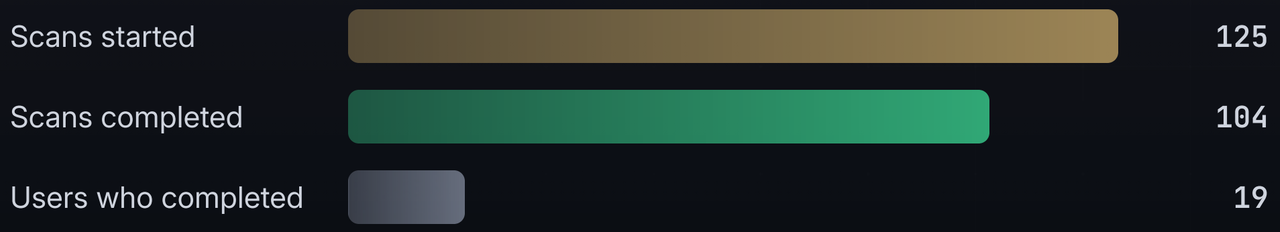

Live since mid-Oct 2026. *Zero paid marketing.*

PUBLIC ACCURACY TRACKER

memecheck.pages.dev/rugs

75
coins recorded publicly, misses included

2/2
High-risk flags that later rugged

NODF · flagged High — LATER RUGGED

TikTok US · flagged High — LATER RUGGED

A safety tool you can *actually verify.*

MIT open source

Every check, every API call, every line of the scanner is public.

`github.com/almasrem459-lab/memecheck`

Published scoring

The real weights behind Low / Medium / High / Extreme are documented — no black box.

`memecheck.pages.dev/how`

Public accuracy tracker

Hits and misses recorded in the open, so users can judge the verdicts.

`memecheck.pages.dev/rugs`

Free, no account

No sign-up, no paywall, no wallet connection needed to scan.

`memecheck.pages.dev`

Great tools exist. *MemeCheck combines them in one scan.*

CAPABILITY	RUGCHECK	BUBBLEMAPS	SOLSNIFFER	TOKENSNIFFER	MEMECHECK

Solana dApp Store app	·	·	·	·	PLANNED

✓ = well-known core capability. "·" = not assessed here — it does not mean the tool lacks it. MemeCheck's edge is the combination: all signals in one free scan, in plain language, on mobile.

Seven data sources. *One verdict.*

- RugCheck — TOKEN REPORT
- DexScreener — PAIRS · TXNS
- Helius RPC — ON-CHAIN
- pump.fun — LAUNCHES · DEV
- GoPlus — SECURITY
- Honeypot.is — SELL SIM
- GeckoTerminal — POOLS · OHLC

CLOUDFLARE

Pages + Functions

Edge functions fetch, cache and merge signals in parallel, then score them.

`/api · proxy · cache`

`dev · snipers · holders · flows`

`open scoring engine`

- **Low**
- **Medium**
- **High**
- **Extreme**

+ plain-language reasons, on web today and mobile next

Mohamad Almasre *(Jojo)*

Solo founder & developer · Germany

Designed, built and shipped MemeCheck end-to-end: the scanner, the scoring engine, the bubble map, sniper and flow detection, and the full English + Arabic UI — open source from day one.

Check before you *swap.*
